

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a tool made out of high quality materials intended to withstand the most demanding operations and work environments. This particular piece of equipment can enable the individual driving to work the blades hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the entire load or the arms so as to facilitate more accurate carrying and placement in a faster and much more effective way.

The unique fork pocket design can enable the individual operating it to be able to securely swing the unit's blades without any worry of destroying the positioning cylinders. This could allow the operator the choice to either execute simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into blade positioners on existing units.
